dwani.ai is a multimodal document analytics platform

It can be self-hosted and is designed for Indian + European Languages.

Interact using Text, Voice, Image and Documents for learning, analysis and exploration.

It currently supports 12 Indian languages - Assamese, Bengali, Gujarati, Hindi, Kannada, Malayalam, Marathi, Odia, Punjabi, Tamil, Telugu and English

During the workshop, you will learn how to use the dwani.ai API and build simple UX programs using python and gradio. You will also get a walk through of the core modules of dwani.ai.

Workshop participants will get Free API access to build their projects and kickstart their entrepreneurial journey

Prequisites:
1. Python (= >3.10) - Mandatory
2. Github Account – Mandatory
